

Koorosh Komeili Zadeh

Junior Software Engineer - Data Platforms & Backend Systems

Randstad Area, the Netherlands

 (+31) 6 8782 4064  kooroshkz  kkomeilizadeh@gmail.com  kooroshkz  kooroshkz.com

Work Experience

Software Engineer Intern – Data Platforms – TomTom (Sep 2025 – Present)

Working on scalable backend systems and data platforms, contributing to product-facing tools with focus on performance, reliability, and large-scale data workflows.

- Maintained and optimized ETL pipelines and backend platforming tools using Scala, Python, and Apache Spark on Azure Databricks
- Automated deployment, orchestration, and data governance using Databricks DABs, Unity Catalog, and Azure Data Lake
- Implemented monitoring and observability solutions for metrics, logs, costs, and performance visualization on Grafana
- Collaborated with cross-functional teams to design and improve cloud-based, distributed data workflows

Software Engineer Intern – Backend Systems – Diplora (Jun 2024 – Feb 2025)

Developed backend services and APIs for high-frequency data systems in a cloud production environment, contributing to scalable and production-ready systems.

- Migrated legacy workflows to a cloud-native architecture, improving system reliability, scalability, and maintainability
- Built real-time streaming pipelines with Apache Kafka for reliable ingestion and buffering of high-frequency data
- Developed Python-based platform tools and REST APIs using AWS Lambda, API Gateway, and S3
- Designed event-driven architectures to support scalable and efficient data workflows

Teaching Assistant – Leiden Institute of Advanced Computer Science (Feb 2024 – Present)

Supported courses in Algorithms and Data Structures, Object-Oriented Programming, Software Development, Data Science and System Security.

Education

Leiden University – BSc in Computer Science - Data Science and Artificial Intelligence (Sep 2023 – Jun 2026)

Relevant Coursework: System Design, Object-Oriented Programming, Algorithms & Data Structures, Distributed Systems, Software Security

Thesis: Adaptive data profiling for improving data quality, observability, and backend pipeline reliability

Projects

AcciBot - Vehicle Accident Detection Bot

Developed a cloud-based backend system and REST APIs using AWS IoT Core. Built event-driven pipelines with AWS Lambda, API Gateway, and S3 for real-time processing and alerting.

Weather Forecast Monitoring System

Developed an end-to-end backend data pipeline using Python and Apache Airflow, storing time-series data in MySQL and Snowflake, focusing on data consistency and pipeline reliability.

Skills

Programming Languages	Python, Java, JavaScript, SQL
Backend & Product Development	REST APIs, FastAPI, Flask, Django, Node.js, React, Microservices, API Design, Unit & Integration Testing
Cloud & Databases	AWS (Lambda, API Gateway, S3, EC2, DynamoDB), Azure (Functions, Data Lake), PostgreSQL, MySQL, MongoDB
Data & Streaming	Kafka, Airflow, Apache Spark, Data Warehousing, ETL Pipelines
DevOps & Tooling	Linux, Git, Docker, Kubernetes, CI/CD, Monitoring & Observability (Grafana), Terraform

Licenses & Certifications

Microsoft Certified Azure Developer Associate AZ-204 (Ongoing)

Machine Learning Specialization – Stanford Online (Aug 2023)

CS50x Introduction to Computer Science – Harvard University (Dec 2022)

Agile project management with Scrum for Engineers – Amirkabir University of Technology (Dec 2022)
